The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Personal computers
- Office automation
- Telecommunication equipment
- Test and measurement equipment
- Industrial control
- Audio visual and multimedia equipment
- Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e., aircraft, trains, automobiles, etc.)
- Traffic signals
- Gas leakage sensor breakers
- Alarm equipment
- Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
- Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

## (1) Application

This literature applies to LS037V7DD05.

## (2) Overview

This module is a color transfective and active matrix LCD module incorporating CG-Silicon TFT (Continuous Grain-Silicon Thin Film Transistor), named AD-TFT (Advanced TFT). It is composed of a color TFT-LCD panel, driver ICs, an FPC, a back light, a touch panel and a back sealed casing. It isn't composed control circuit. Graphics and texts can be displayed on a  $480 \times 3 \times 640$  dots panel with 262,144 colors by supplying.

This LCD module has multi resolution and multi colors functions. A resolution mode is selective in VGA ( $480H \times 640V$ ) or QVGA ( $240H \times 320V$ ). A Color mode is selective in 262,144 colors (18bit RGB) or 8 colors (3bit RGB).

Optimum view angle is 6 o'clock. An inverted display mode is selective in the vertical and the horizontal direction.

※Cautions when you turn on or off the power supply

- ① Stabilize VSHD(3.3V) within double vertical periods second.
- ② Supply SPS, DATA(White pattern), REV(with High), and other signals. Stabilize VSHA(+5V), VDD(+8V), VSSD(-4V) within double vertical periods.
- ③ MOD signal and VEE(-8V) are supplied. Stabilize VEE(-8V) within single vertical period.
- ④ White pattern is displayed during double or more vertical periods.
- ⑤ REV signal is stopped with High level. VSHA(+5V) supply is stopped, which is stabilized within double vertical periods.
- ⑥ VDD(+8V), VSSD(-4V) and VEE(-8V) supplies are stopped, which are stabilized within double vertical periods.
- ⑦ SPS, DATA, REV and other IF signals are stopped with Low level. Then VSHD(+3.3V) supply is stopped.

【Note 7-1】 SSC, ASC, LBR, REV, CO, LP, SPR, SPL, DCLK, U/L, MO, CLS, SPS, MOD, R0~R5, G0~G5, B0~B5 terminals are applied.

【Note 7-2】 VCOMAC should be alternated on VCOMDC every 1 horizontal period and 1 vertical period. VCOMDC bias is adjusted so as to minimize flicker or maximum contrast every each module.  $VCOM = VCOMAC + VCOMDC$

【Note 7-3】 CsCOMAC should be alternated on CsCOMDC every 1 horizontal period and 1 vertical period. CsCOM's phase is as same as VCOM's.  $CsCOM = CsCOMAC + CsCOMDC$

**Measuring method (b) for optical characteristics**

[Note 9-1] Viewing angle range is defined as follows.

**Definition for viewing angle**

[Note 9-2] Definition of contrast ratio:

The contrast ratio is defined as follows:

$$\text{Contrast ratio(CR)} = \frac{\text{Photodetector output with all pixels white(GS63)}}{\text{Photodetector output with all pixels black(GS0)}} \times \frac{V_{COMAC}=5.0V_{p-p}}{V_{COMAC}=5.0V_{p-p}}$$

[Note 9-3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note 9-4] A measurement device is Minolta CM-2002.

[Note 9-5] Definition of reflection ratio

$$\text{Reflection ratio} = \frac{\text{Light detected level of the reflection by the LCD module}}{\text{Light detected level of the reflection by the standard white board}}$$

[Note 9-6] A measurement device is ELDIM EZContrast

## (11) Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD..

## (12) Mechanical characteristics

### 12-1) External appearance

See Fig. 1

### 12-2) FPC (for LCD panel) characteristics

#### (1) Specific connector

LCD-FPC : HIROSE FH23-61S-0.3SHAW(05) (Bottom contact only)

T.P-FPC : JST 04(1.0)9FLH-SM1-G-TB(LF)

#### (2) Bending endurance of the bending slits portion

No line of the FPC is broken for the bending test (Bending radius=0.6mm and angle=90°) in 30 cycles.

### 12-3) Design guidance for touchpanel(T/P)

#### 12-3-1) Example of housing design

(1) If a consumer will put a palm on housing in normal usage, care should be taken as follows.

(2) Keep the gap, for example 0.3 to 0.7mm, between bezel edge and T/P surface.

The reason is to avoid the bezel edge from contacting T/P surface that may cause a "short" with bottom layer(See Fig.2)

(3) Insertion a cushion material is recommended.

(4) The cushion material should be limited just on the busbar insulation paste area.

If it is over the transparent insulation paste area, a "short" may be occurred.

(5) There is one where a resistance film is left in the T/P part of the end of the pole.

Design to keep insulation from the perimeter to prevent from mis-operation and so on.

12-3-2) Mounting on display and housing bezel

- (1) In all cases, the T/P should be supported from the backside of the glass.
- (2) Do not use an adhesive-tape to bond it on the front of T/P and hang it to the housing bezel.
- (3) Never expand the T/P top layer (PET-film) like a balloon by internal air pressure.  
The life of the T/P will be extremely short.
- (4) Top layer, PET, dimension is changing with environmental temperature and humidity.  
Avoid a stress from housing bezel to top layer, because it may cause “waving”.
- (5) The input to the Touchpanel sometimes distorts touch panel itself.

Fig.2

### (13) Handling Precautions

#### 13-1) Insertion and taking out of FPCs

Be sure insert and take out of the FPC into the connector of the set after turning off the power supply on the set side.

#### 13-2) Handling of FPCs

The FPC for LCD panel shall be bent only slit portion. The bending slit shall be bent uniformly on the whole slit portion with bending radius larger than 0.6mm ,and only inner side (back side of the module). Don't bend it outer side (display surface side).

Don't give the FPCs too large force, for example, hanging the module with holding FPC.

#### 13-3) Installation of the module

On mounting the module, be sure to fix the module on the same plane. Taking care not to warp or twist the module.

#### 13-4) Precaution when mounting

- (1) If water droplets and oil attaches to it for a long time, discoloration and staining occurs. Wipe them off immediately.
- (2) Glass is used for the TFT-LCD panel or touch panel. If it is dropped or bumped against a hard object, it may be broken. Handle it with sufficient care.
- (3) As the CMOS IC is used in this module, pay attention to static electricity when handling it. Take a measure for grounding on the human body.

#### 13-5) Others

- (1) The liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in direct sunlight and strong ultraviolet rays for many hours.
- (2) If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also, if it is kept at a temperature above the rated storage temperature, it becomes isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.
- (3) If the LCD breaks, don't put internal liquid crystal into the mouth. When the liquid crystal sticks to the hands, feet and clothes, wash it out immediately.
- (4) Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- (5) Observe general precautions for all electronic components.
- (6) VCOM must be adjusted on condition of your final product. No adjustment causes the deterioration for display quality.
- (7) Static image should not be displayed more than 5 minutes in order to prevent from occurrence of residual image.

## (14) Reliability Test Conditions for TFT-LCD Module

Table 14

No.	Test items	Test conditions
1	High temperature storage test	Ta=+70°C 240h
2	Low temperature storage test	Ta=-20°C 240h
3	High temperature and high humidity operating test	Tp=+40°C , 95%RH 240h (But no condensation of dew)
4	High temperature operating test	Tp=+60°C 240h
5	Low temperature operating test	Tp=-10°C 240h
6	Electro static discharge test	±200V · 200pF(0Ω) 1 time for each terminals
7	Shock tset	980 m/s <sup>2</sup> , 6 ms ±X, ±Y, ±Z 3 times for each direction (JIS C0041, A-7 Condition C)
8	Vibration test	Frequency range: 10Hz~55Hz Stroke: 1.5 mm Sweep: 10Hz~55Hz X,Y,Z 2 hours for each direction (total 6 hours) (JIS C0040,A-10 Condition A)
9	Heat shock test	Ta=-20°C~+70°C / 5 cycles (1h) (1h)
10	Point activation test (Touch panel)	Hit it (1,000,000) times with a silicon rubber of R8 HS 60. Hitting force : 250g Hitting speed : 3 times per second
11	Writing friction resistance test (Touch panel)	Write according to the right illustration in the under-mentioned conditions: Pen : 0.8R Polyacetal stylus Load : 250gf Speed : 3 strokes per second Stroke : 35mm Frequency : (50,000) times × 4 pieces Testing apparatus : shown in Fig 3

15-1) Indication of lot number

The lot number is shown on a label. Attached location is shown in Fig.1 (Outline Dimensions).

Indicated contents of the label

15-2) Used Regulation of Chemical Substances Breaking Ozone Stratum

Substances with the object of regulating : CFCS, Carbon tetrachloride, Halon

1,1,1-Trichloro ethane (Methyl chloroform)

- (a) This LCD module, Constructed part and Parts don't contain the above substances.
- (b) This LCD module, Constructed part and Parts don't contain the above substances in processes of manufacture.

15-3) If some problems arise about mentioned items in this document and other items, the user of the TFT-LCD module and Sharp will cooperate and make efforts to solve the problems with mutual respect and good will.

(16) Forwarding form (see Fig. 2 Package Form)

- a) Piling number of cartons : TBD
- b) Package quality in one cartons : TBD
- c) Carton size : TBD
- d) Total mass of 1 carton filled with full modules : TBD

Conditions for storage.

Environment

- (1) Temperature : 0~40°C
- (2) Humidity : 60%RH or less (at 40°C)  
No dew condensation at low temperature and high humidity.
- (3) Atmosphere : Harmful gas, such as acid or alkali which bites electronic components and/or wires, must not be detected.
- (4) Period : about 3 months
- (5) Opening of the package : In order to prevent the LCD module from breakdown by electrostatic charges, please control the room humidity over 50%RH and open the package taking sufficient countermeasures against electrostatic charges, such as earth, etc.
