## 7. 3-WIRE COMMAND FORMAT

### 7.1 3-Wire Command Format

*R/W*: Read/Write mode control bit. *R/W*=1: read mode. *R/W*=0: write mode.

- Each serial command consists of 16 bits of data which is loaded one bit a time at the rising edge of serial clock SCL.
- Command loading operation starts from the falling edge of CS and is completed at the next rising edge of CS.
- The serial control block is operational after power on reset, but commands are established by the VSYNC signal. If command is transferred multiple times for the same register, the last command before the VSYNC signal is valid.
- If less than 16 bits of SCL are input while CS is low, the transferred data is ignored.
- If 16 bits or more of SCL are input while CS is low, the previous 16 bits of transferred data before the rising edge of CS pulse are valid data.
- Serial block operates with the SCL clock
- Serial data can be accepted in the power save mode.

## 14. COG PRODUCTS MANUFACTURING GUIDELINES

### 14.1 Purpose:

The purpose of this specification is to identify ACF bonding process, so that customers can use properly ACF and Chip during the assembly.

### 14.2 Scope:

ACF bonding process

### 14.3 Noun definition

COG: Chip on Glass

ACF (Anisotropic Conductive Film): .ACF is a functional adhesive tape which is able to connect (**conductivity**, adhesion, insulation) multiterminals in one time

CTE: Coefficient of thermal expansion.

### 14.4 Responsibility unity:

ORISETECH Quality Assurance unity

### 14.5 Contents:

#### 14.5.1 Applicable documents

IPC-SM-782: Surface Mount Design & Land Pattern Standard

IPC-7351 Generic Requirements for Surface Mount Design and Land Pattern Standard.

IPC JEDEC: J-STD-033A Standard for Handling, Packing, Shipping and Use of Moisture/Reflow Sensitive Surface Mount Devices

JESD22-B111: Board Level Drop Test of Components for Handheld Electronic Products

IPC-A-610: Acceptability of Electronic Assemblies

#### 14.5.2 ACF Characteristics:

Three factors to achieve the connection: Temperature, Pressure, Time.

#### 14.5.3 ACF process :

To use Low Temperature and Low stress ACF is recommended for thin chip as 300 um.

Warp issues may happen if customers do not use Low Temperature and Low stress ACF for long chip .And warp issues may induce chip broken after ACF bonding for the CTE mismatch of Glass and ACF and Chip.

To use 3um ACF is recommended for BUMP space is less than 13um.

To use Low temperature and long time bonding is recommended if delamination happens in edge of chip.

For fine pitch and thin chip (300 um) products, customer should review

ACF bonding condition with ACF maker.
